

PRODUCT NAME: ANTISCALE DRYPACK  
PRODUCT CODE: ADRY5  
COMMODITY CODE: 25070020  
COUNTRY OF ORIGIN: UNITED KINGDOM  
PACKAGING: 5 KG

## TECHNICAL INFORMATION SHEET

### ANTISCALE DRYPACK - FERMENTATION

#### Description

Antiscale Dry Pack is an easily applied, aseptic temporary coating material for use on fermenting vessels, attemperators, filter plates etc. The coating is removed during the washing cycle leaving the surface ready to receive a fresh aseptic film. Antiscale helps at the air-liquid interface to keep dried on residues in an easily removable state, so making it more difficult for beer-scale to take hold.

#### Benefits

- Easy to apply
- Aseptic temporary coating
- Helps keep on dried residues in a removable state
- Easily rinsed off
- Prevents beerscale build up

#### Application and Rates of Use

Antiscale Dry Pack is supplied as a powder containing an approved food-grade preservative, and a separate vial of disinfectant. The disinfectant should be diluted to about 7 litres with water and left to stand for about 2 hours. The treated water is then added to the powder slowly with stirring until a smooth paste is formed. Portions of the stock paste are then diluted with water to the desired consistency prior to use, the balance being stored in the tightly sealed container in a cool place.

#### Guidelines for use

- Avoid creating and breathing dust and eye / skin contact.
- Read the Material Safety Data sheet prior to use

#### Specification

COMPOSITION	China clay, Sodium Metabisulphate and a separate vial of amteric
APPEARANCE	White to off white powder
ODOUR	Free from odour
<u>Analysis</u>	
Weight	5 kg +/- 0.1 kg

#### Storage & Shelf life

- Store in cool conditions, away from direct sunlight
- Keep containers sealed when not in use
- Storage temperature 30°C
- The shelf life at the recommended storage conditions is 2 years months from the date of manufacture. If you wish to use the product after this time please contact us for approval.
