DESCRIPTION

Food grade Potassium Metabisulphite (E224) is a white crystalline powder which provides a convenient way of adding measured quantities of sulphur dioxide.

BENEFITS

- Approved for use in food and beverage products
- Prevents microorganisms from growing and reproducing
- Prevents biological spoilage
- Has antioxidant properties
- Increases the stability and prolongs shelf life of wine, cider and beer
- Can be used for the removal of free chlorine in tap water which can cause chlorophenolic off flavours in beer
- Can be used as an alternative to Sodium Metabisulphate where sodium salt is not preferred.
Principle

Potassium Metabisulphite is a permitted derivative form of sulphur dioxide and is a well established proven preservative which is used in the brewing, wine and food industries. It is also known as E224. Added to wine and cider at the pH range of between 3.6 and 4.4 it prohibits the growth of wild yeasts, bacteria and fungi giving effective prevention of biological spoilage. In addition to this its antioxidant properties confer increased physical stability and prolonged shelf life to beer.

Guidelines for use

- Check that the product is within its shelf life before use
- Read the Safety Data Sheet prior to use
- The maximum level permitted for SO$_2$ in cask conditioned beer is 50 ppm. In all other beers only 20 ppm SO$_2$ is permitted (Council Regulation 1333/2008/EC)
- Sulphur dioxide and sulphites at concentrations of more than 10 mg/kg (ppm) or 10 mg/litre (ppm) expressed as SO$_2$ must be labelled as allergenic (European Directive 2003/89/EC)
- For the maximum levels permitted for SO$_2$ in wine please refer to the following table:

<table>
<thead>
<tr>
<th>Type of Wine</th>
<th>Maximum permitted levels of SO$_2$ for EU Law</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red</td>
<td>150 mg/l (ppm)</td>
</tr>
<tr>
<td>White / Rose</td>
<td>200 mg/l (ppm)</td>
</tr>
<tr>
<td>Sweet</td>
<td>300 mg/l (ppm)</td>
</tr>
</tbody>
</table>
Application and rates of use

Potassium metabisulphite is added at any point in the process when used as a preservative.

1.75gms Potassium Metabisulphite per hectolitre gives 10 ppm sulphur dioxide (SO₂)

Storage and shelf life

- Store in cool dry conditions away from direct sunlight
- Keep in original container
- Keep containers tightly sealed when not in use
- Maximum storage temperature is 30°C
- Recommended storage temperature is ambient
- The shelf life at the recommended storage conditions and temperature is six months from date of manufacture
